

OBSERVATIONS 2008-2009

*A Compendium of Information
for and about
Pasadena City College*

INSTITUTIONAL PLANNING AND RESEARCH OFFICE
PASADENA CITY COLLEGE
OCTOBER 2009

TABLE OF CONTENTS

Foreword	vii
Acknowledgments	viii
Technical Notes.....	ix
Chapter 1: Our Community	1
Service Area	2
Residency and Cities	4
Ethnicity	6
Participation Rates by Ethnicity.....	8
Participation Rates by High School.....	10
Chapter 2: Student & Enrollment Trends	13
Credit Students	14
Gender	16
Age	18
Ethnicity	20
Citizenship	24
Education Level	26
Educational Goal.....	28
Full-time/Part-time.....	30
Enrollments in Day & Evening Classes	32
Chapter 3: New PCC Students	35
First-time College Students	36
Residency Status.....	38
Gender.....	40
Age	42
Ethnicity	44
Citizenship	48
Education Level	50
Educational Goal.....	52
Chapter 4: Noncredit Students.....	55
Noncredit Students	56

Mailing Address	58
Programs	60
Gender	62
Age	64
Ethnicity	66
Citizenship	68
Chapter 5: Special Populations	71
Athletes	72
Disabled Student Programs and Services	76
Extended Opportunity Programs and Services.....	78
Financial Aid.....	80
International Students	82
Veterans	84
Chapter 6: Grades, Success & Retention	87
Grade Distribution.....	88
Gender.....	90
Age	92
Ethnicity	94
GPA	98
Division.....	100
Course Type	104
Vocational Courses.....	108
Chapter 7: Student Outcomes	111
Units	112
Credit Ratio	114
Probation Status.....	116
Probation Type	118
Persistence	120
Basic Skills Improvement.....	122
Success in Vocational Courses.....	124
Chapter 8: Degrees, Certificates, & Transfers	127
Degrees and Certificates	128

Gender.....	130
Age	132
Ethnicity	134
Certificate Programs	138
Degrees and Certificates by Community College	140
Transfers.....	142
Chapter 9: Course Offerings & Enrollment	145
Sections, Seats, and Enrollments	146
Course Sections	148
Basic Skills Enrollment.....	150
Basic Skills Enrollment of First-time Students	152
Chapter 10: Fall Student Survey	155
Methodology	156
Evaluation of PCC.....	158
Instruction at the College.....	160
Engagement in the Classroom.....	162
Usage of Support Services	166
Satisfaction with Support Services.....	168
Chapter 11: Faculty/Staff/Administration	171
Employees	172
Gender.....	174
Ethnicity	176

FOREWORD

Welcome to the 2008-2009 edition of Pasadena City College's (PCC) *Observations*! Through tremendous teamwork, we in the Institutional Planning and Research Office wrote this book to answer many questions frequently asked about the College's programs and services, classes, students, student outcomes, and employees. We hope it will tell you some things about PCC you might not yet know, and have no doubt that it will raise further questions. Beyond that, we hope it will supply a common foundation of information on which the College community can base discussions and decisions about the future of PCC. We welcome any ideas you might have for additions to the next edition of *Observations* or other research projects.

Because different readers seek and digest information in different ways, in most sections, we have presented information in tabular, graphic, and narrative form. The tables typically contain the most detailed data, the graphs show some trends over time or a snapshot of a particular term, and the narrative calls your attention to just a few of the highlights that we have found noteworthy. If you are aware of an interpretation for a particular trend or pattern that is more elegant than ours, or can draw more meaningful implications, we would like to hear from you.

Please send comments and feedback to the Institutional Planning and Research Office.

ACKNOWLEDGMENTS

This book was produced through the creativity and hard work of everyone in the Institutional Planning and Research Office (IPRO). This edition would not have been possible without the diligence and expertise of John Prince, Information Technician, who did the majority of the work for the chapters. Tupe Asiata, Student Worker, edited the tables and figures. Crystal Kollross, Interim Dean, Institutional Planning and Research, provided helpful feedback as well as guiding the project.

Christopher Ross, former Research Assistant, wrote a concise and accurate procedures manual. John Barkman, Research and Planning Analyst, played an integral role in developing the original editions.

TECHNICAL NOTES

General

Students: Are those individuals enrolled in credit classes at Census (or the rough equivalent for positive-attendance classes) who receive one of the following marks for each class on their official transcript: A, B, C, D, F, CR (Credit), NC (No-Credit), P (Pass), NP (No-Pass), I (Incomplete), W (Withdrawal), MW (Military Withdrawal) or FW (Faculty Withdrawal). For this publication, the presence of such a mark for a given class or term in the enrollment history file of the Student Records database determines who is counted. Numbers for NC and I grades may not be reported because so few students receive these. Except for the chapters on noncredit students and the Fall Student Survey, all students referred to in this book are credit students. They may or may not have also been enrolled in noncredit courses. Students referred to in the noncredit chapter are noncredit students who may have been enrolled in credit courses. All enrollment data used in this publication were from our PCC history database.

Percentages: The percentages in the tables and figures may not add up to 100%, due to rounding. The percentages in pie charts are given as integers. This can produce differences from the tables, which report the numbers to the tenth of a percent. Additionally, when the percent unknown is less than 0.5%, it is not reported.

Data Source: Most of the information about PCC students reported in this book has been obtained from the Student Records database. The data presented in *Observations* does not exactly match the California Community Colleges Chancellor's Office data due to differences in data extraction processes. If you find data that appear unreasonable or inconsistent with your own reliable information, please contact the Institutional Planning and Research Office immediately.

Time of Data: This book uses Fall Census as the defining statistical moment for each academic year because most State and federal authorities (e.g., California Community Colleges Chancellor's Office and the National Center for Education Statistics) use it, and because listing every statistic for four terms (Fall, Winter, Spring, and Summer) for every year soon wearies even the most interested reader. Note that some numbers do not match the numbers on the Enrollment Management report and other reports because those reports are run on the actual Census date. Data for this book, on the other hand, were run on later dates using the Fall Census date as a defining variable when pulling from the Student Records database. Some changes to historical data do occur over time in the Student Records database. For some data, such as a student's address, only the most recent value is kept. Thus, information about prior years becomes increasingly inaccurate as the data are overwritten with more recent data. Additionally, small changes occur throughout the Student Records database as inaccurate data is found

and corrected. In order to provide consistent data, this edition of *Observations* froze prior year data to the value it had when first published in a previous edition of *Observations*.

Specific Data

Residence code/address: Analyses of where students come from may be based on either residence code or address, both of which suffer limitations. Residence code, assigned by the Admissions Office, indicates whether a student qualifies as a California resident for tuition purposes at the time of admission. For California residents, it indicates the community college district within which the student lives. For other students, it distinguishes only between out-of-state and foreign tuition payers, without regard to their physical address. Thus, the district within which California residents reside is known, but not the districts within which all tuition-paying students reside. Residence code is stored for each term, and is updated as students notify the college of a change in their residency status, or as California-resident students notify the college of a change in address. So residence code is a coarse indicator of where California-resident PCC students come from over time, but says nothing about nonresident students.

Using either city or ZIP code from a student's address is a much finer indicator of location, and applies to all students regardless of their tuition-paying status. However, it is overwritten upon each reapplication or official change of address, so the data on file reflect only the most recent address of each student, not necessarily his or her address during the term reported. On the other hand, there is no reason to believe that PCC students are moving systematically into or out of the district over time, so the picture portrayed by address is likely to be reasonably accurate. Residence code is reported in Chapters 1 and 3, address in Chapters 1 and 4.

Age: The age groups used here are those used by the Chancellor's Office Research and Analysis Unit. Age is computed using students' birthdates, and reflects each student's age as of the *beginning* of each reported term. The calculation rounded non-whole values down to the next whole value in accord with common usage; for example, any student who was 19.6 or even 19.9 years old at the start of the term was coded as 19.

High School Data Sources: In Chapter 1, the number of graduates from each high school is taken from the High School Performance Reports published by the California Department of Education, Evaluation and Technology Division (<http://www.ed-data.k12.ca.us/welcome.asp>). The number of graduates who enrolled at PCC is taken from High School Reports (Institutional Planning and Research Office). Since the data depend on students voluntarily providing information on their high school education,

the accuracy and completeness of the data are uncertain. Thus, extreme changes from year to year may result from reporting errors rather than real differences.

New College Students: Chapter 3 reports on first-time college students. Issues of *Observations* prior to 2002-2003 also reported on students who were new to PCC, having transferred from other colleges. While preparing the data for the 2002-2003 issue, an administrative error was discovered which had been incorrectly modifying these data for several years. It is possible to reconstruct a list of likely first-time college students, but not of transfer students new to PCC. Thus, only first-time college students have been described in *Observations* since the 2002-2003 edition.

Ethnicity: Data on ethnicity is based on students' self-report using the 23 ethnic categories present on the application. These are summarized into various levels of detail at different points in this issue of *Observations*. As many as eight categories are reported in some places, while other places describe only the largest four ethnic groupings. It is important to distinguish between the categories of "Other" and "All other." "Other" is used only for students who checked either "Other Non-White" or "Other" on their application. In contrast, "All Other" is used for all students who are not part of one of the specific groups included in that particular table or chart.

DSPS: The definition used to define DSPS students in *Observations* is different from that used by the Chancellor's Office. DSPS students have to be enrolled past Census to be counted in *Observations*, whereas the Chancellor's Office stipulates that DSPS students only need to be served by DSPS.

Non-Credit Students: Some students taking particular credit classes also register for non-credit labs and/or tutoring sessions. Students whose only non-credit enrollment is for these specific labs and tutoring sessions are not counted as non-credit students when we report on them in *Observations*.
